

**Amendments to the Claims**

Please amend the claims as follows:

1. (Currently Amended) A communication system that enables remote ~~non-cordless~~ land-line station devices of said system to make and receive calls over a wireless network using a ~~wireless phone, such as a cell phone~~, coupled in series signal-wise between said wireless network and said remote ~~non-cordless~~ land-line station devices,

5 said system comprising:

~~a plurality of wireless interfaces;~~

a cell phone base ~~[[unit]]~~ coupled to a first wireless interface; ~~one of said wireless interfaces;~~

10 said cell phone base ~~[[unit]]~~ is adapted to be coupled signal-wise to said cell phone;

a plurality of remote wireless interfaces;

each said remote ~~non-cordless~~ land-line station device being individual to and coupled to a different one of said remote wireless interfaces; and

15 apparatus responsive to the receipt of an incoming call from said wireless network for extending said incoming call via said cell phone and ~~[[the]]~~ said first wireless interface of said cell phone base ~~[[unit]]~~ to one of said remote ~~non-cordless~~ land-line station devices via the remote wireless interface individual to said one remote ~~non-cordless~~ land-line station device.

2. (Currently Amended) The system of claim 1 characterized in that said apparatus for extending further comprises:

apparatus that monitors said incoming call; and

5 apparatus that detects an on-hook signal at said one remote ~~non-cordless~~ land-line station device for terminating said call. ~~between said one remote non-cordless land-line station device and said wireless network via said cell phone.~~

3. (Currently Amended) The system of claim 1 characterized in that said system further comprises:

apparatus responsive to the initiation of an outgoing call by a calling one of said remote ~~non-cordless~~ land-line station devices for extending said outgoing call via the one of said remote wireless interfaces unique to said calling remote ~~non-cordless~~ land-line station device and via ~~[[the]]~~ said first wireless interface of said cell phone base and via said cell phone to a called station served by said remote wireless network interface.

4. (Currently Amended) The system of said claims 1 characterized in that each said remote ~~non-cordless~~ land-line station device comprises any one of or any combination of:

~~non-cordless~~ land-line telephones;  
computers;  
PDAs;  
communication paths extending to other networks and/or network appliances;  
fax machines;  
fire, security and alarm detection devices;  
printers; and  
household appliances.

5. (Currently Amended) The system of claim 3 wherein said remote non-cordless land-line station devices comprise remote non-cordless land-line telephones, said system further comprising:

apparatus that detects an off-hook state of a calling one of said remote  
5 non-cordless land-line telephones;

apparatus that transmits said off-hook signal from said calling remote  
non-cordless land-line telephone to said cell phone;

apparatus that activates said cell phone in response to the receipt of said  
off-hook signal;

10 apparatus including said cell phone for receiving a called station number from  
said calling remote non-cordless land-line station telephone;

apparatus including said remote wireless interface associated with said calling  
remote non-cordless land-line telephone for transmitting said called station number to  
said cell phone;

15 said cell phone being responsive to the receipt of said called station number for  
initiating the establishment of a call via said wireless network to said called station;

apparatus for detecting an on-hook state of said called station or of said calling  
remote non-cordless land-line telephone for transmitting a call end signal to said cell  
phone; and

20 said cell phone being responsive to said receipt of said call end signal for ending  
said call.

6. (Currently Amended) The system of claim 1 wherein said ~~non-cordless~~ land-line station devices comprise ~~non-cordless~~ land-line telephones and wherein said apparatus for extending said incoming call comprises:

apparatus including said cell phone for detecting the receipt of an incoming call  
5 from said wireless network;

apparatus including said cell phone responsive to said detecting for applying a ringing control signal to ~~[[the]]~~ said first wireless interface associated with said cell phone base;

apparatus for transmitting said ringing control signal to remote wireless interfaces  
10 individual to each of said remote ~~non-cordless~~ land-line telephones;

apparatus responsive to the receipt of said ringing control signal for applying ringing current to said remote ~~non-cordless~~ land-line telephones;

apparatus for generating an off-hook signal at a responsive one of remote ~~non-cordless~~ land-line telephones;

15 said off-hook signal is transmitted to said cell phone via said remote wireless interface individual to said responsive ~~cordless~~ remote land-line telephone;

said cell phone being responsive to the receipt of said off-hook signal for terminating the generation of said ringing control signal;

said remote wireless interfaces being responsive to the termination of said  
20 ringing control signal for termination ringing at said remote ~~non-cordless~~ land-line telephones;

said cell phone being effective to monitor said incoming call;

apparatus for detecting an on-hook state of said ~~called~~ calling station of said wireless network or an off hook signal of said responsive remote ~~non-cordless~~ land-line  
25 telephone for transmitting a call end signal to said cell phone; and

said cell phone being responsive to said receipt of said call end signal for ending said incoming call.

7. (Currently Amended) The system of claim 1 wherein ~~said non-cordless land-line station devices comprise non-cordless land-line telephones~~, characterized in that said cell phone is adapted to serve calls between said wireless network and said remote ~~non-cordless~~ land-line telephones only when said cell phone is connected signal-wise to  
5 said base ~~[[unit]]~~.

8. (Currently Amended) In a system having a first wireless interface adapted to be coupled to a cell phone, said system further having additional a plurality of remote wireless interfaces each of which is adapted to be individual to and coupled to an individual one of a plurality of remote ~~non-cordless~~ land-line telephones;

5 said system further comprising:  
apparatus for receiving indicia of a call request by either said first interface or by one of said additional remote wireless interfaces; and  
apparatus that extends said call request to the other of said first wireless interface or said one additional remote wireless interface interfaces to establish extend  
10 a call connection between said cell-phone and ~~[[a]]~~ one of said remote ~~non-cordless~~ land telephones telephone via said first wireless interface and via the one of said additional remote wireless interface individual to said one remote ~~non-cordless~~ land telephone.

9. (Currently Amended) The system of claim 8 characterized in that:

said apparatus for receiving is operable to receive said indicia via ~~within~~ said first wireless interface from said cell phone and to extend said call via one of said additional remote wireless interface to one of said remote ~~non-cordless~~ land-line telephone  
5 telephones; and

said apparatus for receiving is also operable to receive said indicia via one of ~~within~~ said second additional remote wireless interface interfaces from one of said remote ~~non-cordless~~ land-line telephone telephones and to extend said call connection via said first wireless interface to said cell phone.

10. (Currently Amended) The apparatus of claim 8 wherein at least one of said additional remote wireless interfaces is integrated into the one of said remote ~~non-cordless~~ land-line telephones. ~~individual to said remote wireless interface.~~

11. (Currently Amended) The apparatus of claim 8 including a plurality of remote ~~non-cordless~~ land-line telephones each of which has a pair of tip and ring conductors adapted to be connected to an individual one of a plurality of remote wireless interfaces, and ~~[[each]]~~ at least one of said remote ~~non-cordless~~ land-line telephones includes  
5 conductors connecting a handset of said at least one remote ~~non-cordless~~ land-line telephone to a base of each said at least one remote ~~non-cordless~~ land-line telephone.

12 (Currently Amended) A method of operating a communication system adapted to enable remote ~~non-cordless~~ land-line station devices of said system to make and receive calls over a wireless network using ~~a wireless phone, such as~~ a cell phone ~~[[,]]~~ coupled in series between said wireless network and said remote ~~non-cordless~~ land-line station devices, said method comprising the steps of:

~~-coupling a cell phone base unit to a first one of a plurality of said wireless interfaces;~~

coupling a cell phone base ~~[[unit]]~~ to a first ~~one of~~ said wireless interface ~~interfaces;~~

coupling said base ~~[[unit]]~~ to said cell phone;

coupling each remote ~~non-cordless~~ land-line station device to a different one of a plurality of remote ~~[[said]]~~ wireless interfaces; ~~so that each of said remote non-cordless land-line station devices is individually coupled to a different one of said remote wireless interfaces; and~~

operating apparatus responsive to the receipt of an incoming call from said wireless network for extending said incoming call via said cell phone and said first wireless interface individual to one of said remote ~~non-cordless~~ land-line station devices via the remote wireless interface individual to said one remote ~~non-cordless~~ land-line station device.

13. (Currently Amended) The method of claim 12 further comprising the steps of:  
monitoring said incoming call; and

operating said cell phone for detecting an on-hook signal generated by said at least one remote ~~non-cordless~~ land-line station device for terminating said call.

14. (Currently Amended) The method of claim 12 further comprising the step of:

detecting the initiation of an outgoing call by at least one remote ~~non-cordless~~ land-line station device devices for extending said outgoing call via one of said remote wireless interfaces and first wireless interface of said cell phone base and via said cell phone to a called station.

15. (Currently Amended) The method of said claim 12 characterized in that said remote ~~non-cordless~~ land-line station device comprises any one of or any combination of:

5       ~~non-cordless~~ land-line telephones;  
computers;  
printers;  
PDAs;  
communication paths extending to other networks and/or network appliances;  
fax machines;  
10       fire, security and alarm detection devices; and  
household appliances.

16. (Currently Amended) The method of claim 12 wherein said remote ~~non-cordless~~ land-line station devices comprise remote ~~non-cordless~~ land-line telephones, and wherein one of said remote wireless interfaces is integrated into one of said remote ~~non-cordless~~ land-line telephone telephones to which said one remote wireless  
5       interface is individual, said method further comprising the steps of:

detecting an off-hook state of a calling one of said remote ~~non-cordless~~ land-line telephones;

transmitting said off-hook signal from said calling remote ~~non-cordless~~ land-line telephone via the remote wireless interface individual to said calling remote land-line  
10       telephone and further via said first wireless interface to said cell phone;

activating said cell phone in response to the receipt of said off-hook signal;

transmitting a called station number from said remote wireless interface individual to said calling remote ~~non-cordless~~ land-line telephone to said cell phone via  
15       said first interface; and

operating said cell phone responsive to the receipt of said called station number for initiation initiating the establishment of a call via said wireless network to said called station.

17. (Currently Amended) The method of claim 16 further including the steps of:

operating said cell phone for detecting an on-hook state of said called station or said calling remote ~~non-cordless~~ land-line telephone; and

said cell phone being responsive to said detection of said call end signal for  
5 ending said call.

18. (Currently amended) The method of claim 12 [[17]] wherein said remote land-line station devices comprise remote land-line telephones, characterized in that said system exchanges the following signals between said calling remote ~~non-cordless~~ land-line telephone and said cell phone during the serving of a call initiated by said calling remote  
5 ~~non-cordless~~ land-line telephone:

an off-hook signal generated by said calling remote ~~non-cordless~~ land-line telephone is transmitted via said ~~remote wireless interfaces~~ interface individual to said calling remote land-line telephone to said cell phone via said first wireless interface;

said calling remote ~~non-cordless~~ land-line telephone dials the number of [[the]] a  
10 called station to which said call is to be extended;

transmitting said dialed number ~~is transmitted via said remote wireless interface individual to said calling telephone and further via said first wireless interface~~ to said cell phone which transmits said dialed number to said wireless network for the establishment of a connection to said called station;

15 said cell phone monitors said call until an on-hook signal is detected at said calling remote ~~non-cordless~~ land-line telephone and/or at said called station; and

said cell phone is responsive to the detection of said on-hook signal to terminate the call between said calling remote ~~non-cordless~~ land-line telephone and said called station.

19. (Currently Amended) The method of claim 13 wherein said ~~non-wireless~~ land-line station devices comprise ~~non-wireless~~ land-line telephones, characterized in that said system exchanges the following signals between said cell phone and ~~[[said]]~~ a calling remote ~~non-wireless~~ land-line telephone telephones during the serving of a call

5 received by said cell phone from said wireless network;

in response to receipt of a call from said wireless network, said cell phone transmits a ringing control signal to said remote ~~non-wireless~~ land-line telephones via said remote wireless interfaces of said remote ~~non-wireless~~ land-line telephones;

10 said ringing control signal activates a ring generator in the remote wireless interfaces of said remote ~~non-wireless~~ land-line telephones to apply ringing current to said remote ~~non-wireless~~ land-line telephones ;

the generation of an off-hook signal at a responding one of said remote ~~non-wireless~~ land-line telephones transmits a signal via said remote wireless interface individual to said responding one remote land-line telephone and further via to the said  
15 first wireless interface of associated with said cell phone to terminate the generation of said ringing control signal;

said cell phone terminates the generation of said ringing control signal to terminate ringing at said remote ~~non-wireless~~ land-line telephones;

20 said cell phone establishes a voice path between said cell phone and said responding one of said remote ~~non-wireless~~ land-line telephone telephones; and

said cell phone monitors said call and terminates said call upon the generation of an on-hook signal by said ~~responding one of said~~ remote ~~non-wireless~~ land-line telephone telephones.

20. (Currently Amended) The method of claim 12 characterized in that the step of operating said cell phone is effective to serve calls between said wireless network and said remote ~~non-wireless~~ land-line telephones only when said cell phone is connected signal-wise to said base ~~[[unit]]~~ to connect said cell phone with said first wireless

5 interface via said base ~~[[unit]]~~.
